European HIV testing week 2013

22-29
EUROPEAN
HIV
TESTING
WEEK
2013
TALK HIV.TEST HIV.

Aim and objective of the European HIV Testing week

Overall aim

To increase the proportion of people who are aware of their HIV status and to reduce late HIV diagnosis.

Objective

To create and launch a European testing week to raise further awareness amongst the community, healthcare professionals and policy makers about the importance of increasing HIV testing for people most at risk across Europe

Key messages and target groups

Overarching Key message

- HIV in Europe is calling for the European community to **unite** for one week to **increase awareness of the benefits of HIV testing**; so that more people are aware of their HIV status and can access treatment.

Target groups of the HIV testing week:

- Key populations at higher risk of HIV
- Healthcare professionals and testing programme managers
- Policy makers and organisations

HIV In Europe approach to a European HIV testing week

- Not a one size fits all model! Different challenges, strategies and opportunities in each country
- All countries of the WHO European Region invited to participate
- HIV in Europe created the overall framework
 - I. Compilation of the evidence for scaling up HIV
 - II. Template materials and guidance
 - III. Platform for 'signing up' to the testing week and sharing experiences (website, facebook, twitter)
- By using HIV in Europe's network, individual countries and organisations were encouraged to implement national actions related to the overall goal of the European HIV testing week

2013 Strapline: Talk HIV. Test HIV.

- Ask for a test
- Offer a test
- Create dialogue between stakeholders
